

ENVIRONMENTAL MANAGEMENT PLAN

VERSION 1.0 - SEPTEMBER 2025

WHAT IS DOLPHIN'S ENVIRONMENTAL MANAGEMENT PLAN?

Each year, we set clear, measurable goals through our environmental management plan to reduce operational emissions and drive sustainable progress.

With our dedicated Compliance and Environmental Management Team, we ensure that every aspect of our operations aligns with current regulations and drives meaningful progress toward environmental sustainability.

Dolphin's environmental management plan is a strategic declaration and roadmap of how we are reducing our environmental impact across operations and product lifecycles to become a leader in sustainable commercial washroom solutions.

SUSTAINABILITY STRATEGY OVERVIEW

We partnered with [Wanderlands](#), an international natural solutions consultancy, to carry out a comprehensive carbon footprint analysis of our UK head office and warehouse facilities.

Their insights highlighted the need for more precise emissions tracking and helped us identify key areas where we can make the greatest impact.

This partnership reinforces our commitment to transparency, accountability, and continuous improvement in environmental performance.

WHERE WE'RE TAKING ACTION: REDUCING CARBON AND TRACKING PRODUCT LIFECYCLES

In Dolphin's environmental management plan outline, we have identified these key areas to monitor, implement improvements, reduce embodied and operational carbon across operations and collect data on the life cycles of our commercial washroom supplies:

1. REDUCE REFRIGERANT EMISSIONS

Minimise refrigerant leaks from office HVAC systems to reduce greenhouse gas emissions.

2. TRACK WORK TRAVEL EMISSIONS

Issue fuel cards for work-related travel to accurately track fuel usage and emissions.

3. MONITOR WASTE AND DISPOSAL METHODS

Monitor waste types and disposal methods to support more sustainable practices.

4. COLLECT LIFECYCLE DATA ON SOLD WASHROOM SUPPLIES

Issue fuel cards for work-related travel to accurately track fuel usage and emissions.

5. MINIMISE EMISSIONS THROUGH SMARTER DISTRIBUTION

Issue fuel cards for work-related travel to accurately track fuel usage and emissions.

6. PRODUCE ENVIRONMENTAL PRODUCT DECLARATIONS EPD

Use automated Life Cycle Assessment software to publish verified EPDs for each commercial washroom product.

7. IMPROVE OXYGEN LEVELS AND BIODIVERSITY

Increase oxygen levels and biodiversity by planting trees and vegetation around Dolphin's premises.

8. CRADLE-TO-GRAVE TRACKING

Monitor product performance through to disposal, including disposal methods.

9. CRADLE-TO-CRADLE STRATEGIES

Recycle or upcycle products into new components, supporting circular design principles.

LEADING THE WAY IN SUSTAINABLE WASHROOM DESIGN

Dolphin's environmental management plan is a proactive, measurable strategy to reduce the environmental impact of commercial washroom supplies.

Through data monitoring, lifecycle analysis, and actions like tree planting and emissions tracking, we embed sustainability across every stage, from sourcing to end-of-life.

Building on the progress we have made from the Wanderlands analysis, we have introduced a service that enables commercial washroom supplies to be part of a circular economy: S3 By Dolphin.

The S3 By Dolphin protection plan supports the circular economy by extending the lifespan of commercial washroom supplies through expert maintenance and a dedicated takeback scheme for recycling, upcycling, and refurbishing.

Join us in shaping a more sustainable future and discover how S3 By Dolphin can support your next project.
