

HOW TO CLEAN CERAMIC COATING

If you are looking for guidance on how to clean ceramic coating and how to prevent hard water stains on faucets, soap dispensers, and the Alavo Solo mirror frame, regular maintenance is essential.

Follow this step-by-step guide on how to clean Ceramic coating applied to commercial restroom products and keep your public restrooms looking brand new.

CLEANING MATERIALS

You will need the following cleaning materials:

- › Soft, clean microfiber cloths or sponge
- › Good quality chamois leather cloth
- › Warm, clean water
- › Mild soap or commercial cleaning detergent
- › Soft bristle brush (optional)
- › Limescale remover (optional)

CLEANING METHOD

Although Ceramic coatings are highly durable and can withstand harsh chemicals, it is recommended to adhere to a gentle, non-abrasive cleaning method for optimal maintenance.

CLEANING STEPS:

1. Prepare Cleaning Solution

- › Mix a small amount of mild soap or detergent with warm water.

2. Wipe Down

- › Dip a soft cloth or sponge into the soapy water solution. Wring out any excess water from the cloth, then gently wipe down the ceramic faucet, soap dispenser, or Alavo Solo mirror frame.

- › For intricate areas, a soft bristle brush can be used.

3. Rinse

- › Use clean water to rinse off the soap from the product.

4. Drying

- › Use a dry, clean, good-quality chamois leather cloth or microfiber cloth to dry the surface gently.

5. Final Inspection

- › Check the product to ensure it is clean and dry. If any spots remain, repeat the cleaning process as necessary.

WHAT TO AVOID WHEN CLEANING CERAMIC FINISHES

- › Avoid using any abrasive material like nylon pads or fine steel wool.
- › Avoid vigorous cleaning, as maintaining a Ceramic finish does not require excessive effort.

RECOMMENDED FREQUENCY TO CLEAN CERAMIC FINISHES

The recommended frequency for cleaning a Ceramic faucet, commercial soap dispenser, or Alavo Solo mirror frame depends on their usage, exposure to dirt and debris, and environmental factors.

However, general maintenance tips for determining cleaning frequency are:

- › **Visual Inspection** – Routinely check restroom fixtures for visible signs of dirt, residue buildup, or wear. If any are present, it's time to clean.

- › **Environmental Conditions** – Restrooms in dusty, humid, or high-moisture environments may require more frequent cleaning, as such conditions can accelerate the buildup of grime.
- › **Size and Usage** – The larger the commercial restroom and the heavier the foot traffic, the more often ceramic coated products will need to be cleaned.
- › **Performance and Appearance** – If the functionality or visual appeal of the faucet, soap dispenser, or mirror frame is compromised, clean the item immediately.

However, it's recommended to wear gloves during cleaning, particularly when using commercial cleaning agents, to protect your hands and maintain safety.

- › **Cleaning Around Sensors and Sensitive Areas** – When cleaning touch-free faucets and automatic soap dispensers with commercial cleaning detergents, take care to protect surrounding surfaces and avoid contact with sensors, which can be sensitive to moisture and chemical exposure.
- › **Consult Maintenance Agent** – If you are unsure how to clean ceramic coating with a commercial cleaning detergent, it's best to contact the manufacturer for specific guidance.

CERAMIC COATING MAINTENANCE TIPS

- › **Regular Maintenance** – Regularly clean Ceramic coated restroom products to preserve their appearance and maintain the protective qualities of the Ceramic finish.
- › **Expertise** – Cleaning Ceramic finishes must be done by adequately qualified personnel.
- › **Avoid Abrasive Materials** – Avoid using steel wool and abrasive sponges.
- › **Commercial Cleaning Detergent** – Thanks to their durable properties, ceramic finishes are easy to clean and do not require harsh chemicals. For tougher limescale buildup, a standard household limescale remover is typically sufficient.
- › **Test First** – Always test cleaning detergent on a small, hidden area first to ensure it will not damage the ceramic finish.
- › **Handling** – The superior quality and composition of the ceramic finish make it resistant to fingerprints and oil buildup on restroom products.
